

Dividing a natural number consisting of two digits to a one-digit number - decomposition of the divided -

$$\begin{aligned}
 1 \quad 42 : 3 &= (30 + 12) : 3 \\
 &= 30 : 3 + 12 : 3 \\
 &= 10 + 4 \\
 &= 14
 \end{aligned}$$

$$\begin{aligned}
 2 \quad 64 : 4 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square \\
 &= \square\square
 \end{aligned}$$

$$\begin{aligned}
 3 \quad 34 : 2 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square \\
 &= \square\square
 \end{aligned}$$

$$\begin{aligned}
 4 \quad 96 : 6 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square \\
 &= \square\square
 \end{aligned}$$

$$\begin{aligned}
 5 \quad 91 : 7 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square \\
 &= \square\square
 \end{aligned}$$

$$\begin{aligned}
 6 \quad 75 : 5 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square \\
 &= \square\square
 \end{aligned}$$

$$\begin{aligned}
 7 \quad 78 : 3 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square \\
 &= \square\square
 \end{aligned}$$

$$\begin{aligned}
 8 \quad 92 : 4 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square\square\square\square\square \\
 &= \square\square\square\square \\
 &= \square\square
 \end{aligned}$$
